III. DETAILED ACTION

Claims 1-9 are presented for examination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Hochmuth et al. (Pub. No. 2003/0212742 A1 and Hockmuth hereinafter).

Regarding Claims 1-2 and 10, Houchmuth teaches a method for coordinating a computation upon a plurality of data containers deployed at a plurality of nodes [0004], comprising: at each of the nodes executing a corresponding process configured for starting a program to perform the computation in response to a command [0040] received from a database system [0035]; and at the database system, receiving a statement specifying an external routine for performing the computation

Art Unit: 2165

and, in response to receiving the statement [0035]: concurrently transmitting a plurality of commands for performing the computation to each said corresponding process [0079]; receiving results from each said process; and completing processing of the statement based on the results received from each said process [0044].

Regarding Claim 3, Hochmuth teaches a determining a cohort of nodes from among the plurality of nodes capable of performing the computation, wherein the plurality of the respective processes correspond to the cohort of the nodes [0035].

Regarding Claim 4, Hochmuth teaches plurality of nodes includes at least one node not included in the cohort of the nodes [0035].

Regarding Claims 5 and 9, Hochmuth teaches determining is based on a degree of parallelism supported by each of the nodes [0035].

Regarding Claim 6, Hochmuth teaches accessing a registry specifying an association between the programs and the data containers, wherein said determining is based on the association

between the programs and the data containers [0040].

Regarding Claim 7, Hochmuth teaches accessing a registry specifying respective attributes for the data containers, wherein said determining is based on matching the respective attributes for the data containers with a parameter in the statement [0056].

Regarding Claim 8, Hochmuth teaches accessing a registry specifying a partitioning function associated with the programs and the data containers, wherein said determining is based on the results from executing the partitioning function associated with the programs and the data containers [0025].

**Other Prior Art Made of Record**

The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure. U.S. patents and U.S. patent application publications will not be supplied with Office actions. Examiners advises the Applicant that the cited U.S. patents and patent application publications are available for download via the Office's PAIR. As an alternate source, all U.S. patents and patent application publications are available on the USPTO web site ([www.uspto.gov](http://www.uspto.gov)), from the Office

of Public Records and from commercial sources. For the use of the Office's PAIR system, Applicants may refer to the Electronic Business Center (EBC) at <http://www.uspto.gov/ebc/index.html> or 1-866-217-9197.
